

JsonConverter

```
classDiagram
    class JsonConverter {
    }
    class MongoDBDateTimeConverter {
        +WriteJson()
        +ReadJson()
        +CanConvert()
    }
    MongoDBDateTimeConverter --|> JsonConverter
```

The diagram illustrates a class hierarchy. At the top is the 'JsonConverter' class, represented by a rectangle divided into three horizontal sections. The top section contains the class name, while the two bottom sections are empty. Below it is the 'MongoDbDateTimeConverter' class, represented by a rectangle divided into three horizontal sections. The top section contains the class name, the middle section is shaded gray and empty, and the bottom section is shaded gray and contains three methods: '+ WriteJson()', '+ ReadJson()', and '+ CanConvert()'. A blue arrow with an open triangular head points from the bottom of the 'MongoDbDateTimeConverter' class to the bottom of the 'JsonConverter' class, indicating that 'MongoDbDateTimeConverter' inherits from 'JsonConverter'.

MongoDbDateTimeConverter

+ WriteJson()
+ ReadJson()
+ CanConvert()
